

### **New Furnace in Mantova Factory**

Belleli Energy is proud to announce that we have completed the installation, commissioning and operations of a third large furnace with the following features:

- Gas furnace, proprietary design by Belleli Energy CPE, suitable for PWHT of large reactors
- Dimensions: 33 x 8 x 8 meters with computerized temperature control system up to 1100° C.

This furnace will be able to accommodate large reactors, in whole length, without the necessity of local PWHT, usually considered as a critical fabrication step especially where Cr Mo V modified Low Alloy Steels are involved. Through this accomplishment, Belleli Energy CPE has completed a three years plan investment in technology and facilities for a total amount of 16 million euro.
